School of Computer Science and Engineering**

**CSE 695 Independent Study Presentation**

**Date:**

**Wednesday, October 3, 2014**

**Time:**

**11:30 PM**

**Place:**

**JB-359**

**Title:**

**Online Tomcat Controller**

**Student:**

**Yu Zhou**

**Advisor:**

**DR. DAVID A. TURNER**

**Abstract**

Companies that create their own web server controllers are one of the most remarkable phenomena during the 21st century. As we all know, Google devised a web server controller named Google site which offers to give their clients an opportunity, for example, to make their own website and display for blogs. Due to this convenient technology, I also want to design my own web server as the Google site has done. According to my goal during this summer quarter, I have learned Java as a basic language, Spring SVC as my project framework and Extjs as a display style to create my project.
