

# **2012-2013 Academic Year Guide to Transferable Units: Norco College to CSUSB Computing Programs**

rev. 6/5/2014

## **Overview**

If you are a student at Norco College wishing to transfer to a computing program at California State University San Bernardino (CSUSB), this document contains information that will help you maximize the number of units taken at Norco that will count towards your degree program requirements at CSUSB.

There are 3 computing degree programs at CSUSB: Computer Engineering, Computer Science, and Computer Systems. Within the Computer Systems major, there are 5 options: General Interdisciplinary, System Administration, Web Programming, Game Development, and Graphics Programming. The attached chart identifies courses that you can take at Norco College that will satisfy degree requirements at CSUSB for each of these 7 degree program pathways.

There are 2 types of degree requirements that you need to consider: general education and degree program major. The first set of rows in the chart, labeled A1 through E3, identify the CSUSB general education requirements. The second set of rows, starting from CSE 201 and continuing through the remainder of the table, identify the degree program major requirements for the 7 computing degree program pathways.

To satisfy a given requirement, you only need to take one course listed for that requirement. For example, to satisfy general education requirement A2, you would take either COM 1 or COM 9.

The attached list of courses by degree requirement and major is not a complete list of requirements; it only shows those requirements that can be satisfied by courses taken at Norco College. For a complete list of degree requirements, see the CSUSB catalog.

Degree requirements may change from year to year, so you should consult with the CSUSB catalog corresponding to the year in which you expect to enroll. A convenient place to check to see how courses at Norco will transfer to CSUSB, see <http://assist.org>.
