Title

Arrowheart App

Student

Walter Salaverria

Advisor

David Turner

Abstract

Helped in the development of the Arrowheart application for Arrowhead Credit Union. The application was developed in a Phonegap environment using the following languages: HTML, CSS, JavaScript, PHP, MySQL. The server used was set up with an Amazon Web Server (AWS). The AWS is running a Windows Operating System, which was then set up with a WAMP server (Windows, Apache, MySQL, PHP) for the application's database.
