PHP and Web Development

Chadwick Barensfeld

Dr. Turner

I will be presenting a website I'm developing using PHP, HTML, CSS, and Javascript. The website will be used to help me start a part-time business repairing personal computers. Although I'm currently the only admin, I'm developing this website to grow with my business (multiple admins / technicians). I will present how I use PHP for user creation, authentication, and service request management and CSS and Javascript for making my website interactive and stylish. I will also present the cPanel interface on GoDaddy, which is where I'm hosting my website. This project has given me the opportunity to bring the skills I have learned at CSU San Bernardino together in a creative way.
