CSE 595 Independent Study Presentation

Date

June 13, 2014

Time

3:00 PM

Place

JB 359

Title

Development Operations

Student

Jonathan Gomez

Advisor

Dr. David Turner

Abstract

The subject which I will cover is that of development operations. I will cover topics related to the field of development operations and their role within software development and production. As well as this I will demonstrate actual uses for some of the applications which I have compared during my study. A few of these applications include Docker, Puppet, and Chef. Finally I will present my evaluation of these programs in how they can apply to my daily job as an systems administrator.
