JB 359

Title

Material Estimator

Student

Michelle Irish

Advisor

Professor Ernesto Gomez

Abstract

I will be presenting a material estimator that I have created for a company called Performance Walls Systems LLC. This material estimator will help ask certain amount of measurements and count the amount of insulated concrete forms needed for future projects for my client's company. I will discuss the history of the company, the work it has done, and do a demo of the material estimator on how it works.
