Title

Braehawk Tech Web Application

Student

Nathan Alvarez

Advisor

Dr. David Turner

Abstract

I will be presenting my research, work, trials, and triumphs for creating a web-based application for Braehawk Tech LLC. Braehawk Tech LLC is a company that is dedicated to providing community support for the world of technology. Over the course of Spring 2015, I was an intern for Braehawk Tech LLC during which I developed a WordPress enabled website. My goal for my senior project was to create a companion web application that would help facilitate users mobile experiences with our website. The website is connected to a MySQL enabled database for its content. Therefore, by extension, the web application is able to gather all of the data it needs from the website and all of its subsequent updates.
