JBH-359

Title
Senior Project Presentation

Student
Martin Calvert

Advisor
Dr. Turner

Abstract

This presentation will cover my senior project, which was to build an order management system for Creme De La Creme Bakery. This system allows them to process a custom order, then process the customer information, followed by viewing the orders with different filter types, and finishes with the ability for a customer confirmation upon pickup. I used the following technologies in the development process: HTML, CSS, JavaScript, PHP, & MySQL. The presentation will cover some of the source code, troubles encountered, followed by a brief demo.
