Title
Website using Google & Facebook APIs to login

Student
Inzunza Jose

Advisor
Dr. Turner

Abstract

My project consists of a responsive website that uses the Google
and Facebook APIs to allow users to log in. Additionally, the
website has its own registration process in case users do not want
to use their Google or Facebook identities. When the user logs in,
they land on a forum. The forum was developed using SQL and
PHP. During my presentation I will present a brief summary on ow
to incorporate the Google and Facebook APIs into a PHPbased
Web application. Lastly, I will provide a demo of the site.
