Title
Bubble Shot Scripting

Student
Robert R. Rojas

Advisor
Dr. David Turner

Abstract
Bubble Shot is a mobile game application being created by Ryan Rady, Josh Weston, Sean Lopez, and Tim Castle. Originally written using a combination of scripts written in either Javascript or C#, the decision was later made to convert the scripts to a single language. My primary goal was to assist in the development of Bubble shot by writing and translating code in Javascript from the C# computer language. This presentation will focus on my personal goals for the project, whereas the game and its development as a whole will be presented by the creators Friday, June 13th at 3:30pm.
