Title

SOAR Mobile Application

Student

Louis Hodges

Advisor

E. Gomez

Abstract

The SOAR mobile application was started by Dr. Concepcion's Software Engineering class of Winter 2016. The client is Zach Brenner, Marketing and Communication Specialist of the Division of Student Affairs for CSUSB. Before Spring 2016, the base of the project was completed for both iOS and Android, including updating user profiles and opt-in/out feature. This spring included transferring the server the app uses to a CSUSB server, the downloads page and feedback page(for iOS). A major addition to app is the required accessibility testing. The next step, a suggestion, is to re-design the iOS version. Both were not designed with accessibility but because of how iOS version was made, we made a work-around that could be better. This suggestion is for better usability for all users. The pack page should also have an option to narrow down results as it currently will list every student that signs up.
