Title

PHP Web Programming for LLU

Student

Steve Hergert

Advisor

Dr. David Turner

Abstract

I programmed a blog web application using PHP. Users may create posts, add comments to previously created posts, view all authors, and view all posts by a single author. The main page which displays all posts is paginated, so there are ten posts per page. The page navigation bar at the bottom changes dynamically depending on how many posts are present.
I used MVC and Zend frameworks, and stored application data in an SQL database. I used HTML/CSS and JavaScript to accomplish several tasks.
