CSE 482 Senior Project Presentation

Date
June 11, 2014

Time
2:30 PM

Place
JB359

Title
Inventory Database System

Student
Daniel Urbach

Client
Mr. Ken Han, ITC, College of Arts & Letters

Advisor
Dr. Josephine Mendoza

Abstract
This project involved the design and implementation of a database-driven inventory system for the College of Arts & Letters at CSUSB. The system provides a secure web-based interface for the management of equipment and software owned by the college. Using MYSQL, PHP and Javascript, I designed the interface and database backend as an improvement upon an older system currently in use, adding features such as user authentication, modifying and deleting records, generating search-based reports as well as administration tools for managing user activity and privileges. I will present my work on this project, detailing the steps I took in the creation of the inventory system and how it works.
