June 6, 2014

Time

10:30am

Place

Jack Brown Hall 359

Title

Pechanga Kiosk Form System

Student

Enrique Carbajal Jr.

Advisor

Dr. Ernesto Gomez

Abstract

The Cookie Crumb project was created for Pechanga Resort and Casino by Enrique Carbajal Jr. to keep track of the massive amount of paperwork involved with the reconciliation of the kiosk machines. The reconciliation of the kiosk machines involves counting the physical cash housed in the machine along with creating paperwork for accounting purposes. The Cookie Crumb system makes the auditing of the paperwork much easier by digitizing it. Previously, any auditing must be laboriously done by hand. With the Cookie Crumb system, a few clicks of the mouse will garner any needed information. The system uses a back end Mysql database to house all the pertinent information. It uses a front end web interface to help the user navigate and create the forms.
