Title

The River Church iPhone Application

Student

James Small

Advisor

Dr. Turner

Abstract

For my senior project, I will be presenting an iPhone application created for The River Christian Reform Church in Redlands Ca. I will discuss the application creation process, beginning with the original drawings created by the church, all the way to the final product. The application was written natively using objective-c for the iOS 7.1 sdk. I will discuss the different features of the application, my learning process, and demonstrate the working application in the iOS simulator. Lastly, I will be discussing the different hurdles I encountered and how I solved them.
