Title

Mobile Web Application Development with PHP

Student

Jose Inzunza

Advisor

Dr. David Turner

Abstract

In the Spring quarter of 2014 I built a Web application that allows teachers to manage course gradebooks through their cell phones and also desktop computers. The application is deployed on in a hosted environment. The application is build with PHP and MySQL on the server side, and Javascript and CSS on the client side. The client interface is designed primarily to function well in mobile phone browsers but is also usable in desktop browsers.
