Title

Moodle Server for Chaffey High Avid

Student

Jorge Gamez

Advisor

Dr. Ernesto Gomez

Abstract

By creating a Moodle server for the Avid Students of Chaffey High School, I have created a central place for the Avid students' to discuss in class topics and present project ideas all in one central location. Added benefits from this project include the ability to expose high schools students to the tools that their educators would be using when they enter college. Moodle is an open source course management system that is used throughout varies different schools and organizations. I will presenting some of the process that I went through to setup Moodle, the troubles I endured, the basic hardware needed if anyone wanted to replicate my project, and some of the strengths and limitations in this project.
