CSE 482 Senior Project Presentation

Date
June 6, 2014

Time
1:30 PM

Place
JBH-359

Title
Thin Client Server, Web Server, and Private Cloud

Student
Valerie Becker

Advisor
Dr. Owen Murphy

Abstract

For my senior project presentation, I will be talking about the thin client server, web server, and private cloud server that I created for the Business Education Technologies department for Victor Valley Community College. I will talk about the hardware and software that I used to create the server. Specifically, I'll go over which operating systems I used for each server, the software that I used to create the servers and how I created them. I will also do a demo, where I log in to my thin client server and demonstrate the end result of the project.
